

Infection control that doesn't cost the earth

The wipe material used in Bossklein V-WIPE ZERO ECO-XL wipes is 100% free from plastic. Unlike most other wipes which are made from synthetic fibres and plastics like polypropylene.

Manufacturing wipes from plant based fibres such as viscose uses much less CO2 compared to man made materials like polypropylene.

Bossklein is committed to sustainability in clinical infection control. Our modern formulations are designed to minimise their environmental impact while maintaining effectiveness in combating infections.
