## Eco Facts

### ECO-XL

### Plastic free wipe

The wipe material used is 100% free from plastic. Unlike most other wipes which are made from synthetic fibres and plastics like polypropylene.

### Free from PHMB

The ZERO alcohol free disinfectant solution used within Bossklein ECO-XL wipes contains a synergistic blend of two powerful biocides, is free from PHMB and contains detergent derived from renewable natural resources.

### Plant based fibres

Wipes are made from natural viscose which is 100% renewable and sustainably sourced. As a non toxic, non polluting, natural plant based material, viscose is an ideal substitute for its man made synthetic predecessors.

### It has chemistry

This new formula takes advantage of modern, safer and greener chemical components to create a simpler and more effective product for the end user.

### Reduced CO<sub>2</sub>

Manufacturing wipes from plant based fibres such as viscose uses much less CO<sub>2</sub> compared to man made materials like polypropylene.

Bossklein recognises that by making relatively small changes to the everyday items we use we can have a big impact in reducing the amount of CO<sub>2</sub> that is being released into the environment.

### Smaller carbon footprint

All the elements listed above give each pack of Bossklein V-WIPE ECO-XL a smaller carbon footprint compared to rival wet wipes.

Information applies to products:
